Preface		vi
<b>Chapter 1</b>	ROBERTSON, A. H. F., CAMPBELL, H. J., JOHNSTON, M. R. & MORTIMER, N. Introduction to Paleozoic–Mesozoic geology of South Island, New Zealand: subduction-related processes adjacent to SE Gondwana	1
<b>Chapter 2</b>	JOHNSTON, M. R. The path to understanding the central terranes of Zealandia	15
<b>Chapter 3</b>	CAMPBELL, H. J. Biostratigraphic age review of New Zealand’s Permian–Triassic central terranes	31
<b>Chapter 4</b>	ROBERTSON, A. H. F. & PALAMAKUMBURA, R. Geological development and regional significance of an oceanic magmatic arc and its sedimentary cover: Permian Brook Street Terrane, South Island, New Zealand	43
<b>Chapter 5</b>	JUGUM, D., STEWART, E., PALIN, J. M., MORTIMER, N., NORRIS, R. J. & LAMB, W. M. Correlations between a heterogeneous mantle and multiple stages of crustal growth: a review of the Dun Mountain ophiolite, New Zealand	75
<b>Chapter 6</b>	STEWART, E., NEWMAN, J., TIKOFF, B., DONNELLY, S., GERMAN, L., CHATZARAS, V., LAMB, W. M., MILLER, B. & KRUCKENBERG, S. C. Coupled deformation and melt-migration events recording subduction initiation, Dun Mountain ophiolite, New Zealand	93
<b>Chapter 7</b>	ROBERTSON, A. H. F. Patuki and Croisilles melanges in South Island, New Zealand: genesis related to Permian subduction–accretion processes	119
<b>Chapter 8</b>	ROBERTSON, A. H. F. Mid–Late Permian Upukerora Formation, South Island, New Zealand: fault-controlled mass wasting of the Early Permian Dun Mountain ophiolite and initiation of the Permian–Triassic Maitai continental margin forearc basin	157
<b>Chapter 9</b>	ROBERTSON, A. H. F. & PALAMAKUMBURA, R. Sedimentary development of the Mid-Permian–Mid-Triassic Maitai continental margin forearc basin, South Island, New Zealand	189
<b>Chapter 10</b>	ROBERTSON, A. H. F. & PALAMAKUMBURA, R. Sedimentary geochemistry used to infer the provenance of Permian–Triassic marine sandstones related to the SE Gondwana active continental margin, South Island, New Zealand	231
<b>Chapter 11</b>	PALAMAKUMBURA, R. & ROBERTSON, A. H. F. Geochemistry used to infer source characteristics and provenance of mudrocks of the Permian–Triassic Maitai Group and the associated Patuki Melange, South Island, New Zealand	267
<b>Chapter 12</b>	MORTIMER, N., TURNBULL, R. E., ROBERTSON, A. H. F. & CAMPBELL, H. J. A 251 Ma diorite clast from a Maitai Group conglomerate and a <i>c.</i> 259 Ma microdiorite sill intruding the Productus Creek Group, Southland, New Zealand: note	287
<b>Chapter 13</b>	ROBERTSON, A. H. F., PALAMAKUMBURA, R. & CAMPBELL, H. J. Permian–Triassic felsic tuffs in South Island, New Zealand: significance for oceanic and active continental margin subduction	293
<b>Chapter 14</b>	ADAMS, C. J., CAMPBELL, H. J., MORTIMER, N. & GRIFFIN, W. L. Crossing Cook Strait: terranes of the Marlborough Schist, Kapiti Island and Wellington	323
<b>Chapter 15</b>	ROBERTSON, A. H. F., CAMPBELL, H. J., JOHNSTON, M. R. & PALAMAKUMBURA, R. Construction of a Paleozoic–Mesozoic accretionary orogen along the active continental margin of SE Gondwana (South Island, New Zealand): summary and overview	331
