

Quarterly Journal of Engineering Geology and Hydrogeology

The journal is abstracted and/or indexed in Current Contents, ASCA, Science Citation Index, Groundwater On-Line, Geological Abstracts, International Civil Engineering Abstracts, Petroleum Abstracts, Geotechnical Abstracts, GeoArchive, GeoRef and Geobase.

CONTENTS – Volume 52, Part 2, May 2019

Introduction

Introduction to the Nineteenth Glossop Lecture
Matt Hilton

139

Review article: The Nineteenth Glossop Lecture

The lines of evidence approach to challenges faced in engineering geological practice
Kevin D. Privett

141

Review article

Aggregate supply in Hong Kong: past, present and looking to the future
Stuart Millis, Kitty Chan & Mark Wallace

173

Design and interpretation of packer permeability tests for geotechnical purposes
Martin Preene

182

Thematic set: QJEGH 50th Anniversary Review paper

Contaminated land and the QJEGH: 1976–2017 and beyond
C. Paul Nathanail

201

Photographic feature

Geology, geomorphology and geohazards on a section of the Betic coastline, southern Spain
G. J. Hearn

208

Research article

Shrinkage limit test results and interpretation for clay soils

P. R. N. Hobbs, L. D. Jones, M. P. Kirkham, D. A. Gunn & D. C. Entwisle

220

Site investigation and use of artificial neural networks to predict rock permeability at the Siazakh Dam, Iran

Davood Akbarimehr & Esmail Aflaki

230

Determining constraints imposed by salt fabrics on the morphology of solution-mined energy storage cavities, through dissolution experiments using brine and seawater in halite

L. P. Field, A. E. Milodowski, D. Evans, B. Palumbo-Roe, M. R. Hall, A. L. Marriott, T. Barlow & A. Devez

240

Quarterly Journal of Engineering Geology and Hydrogeology (ISSN 1470-9236) is published in February, May, August and November by the Geological Society of London, Burlington House, Piccadilly, London W1V 0BG.

The US annual subscription price is \$1,589 (online + print). Airfreight and mailing in the USA by agent named WN Shipping USA, 156-15, 146th Avenue, 2nd Floor, Jamaica, NY 11434, USA. Periodicals postage paid at Jamaica NY 11431. US Postmaster: Send address changes to the Quarterly Journal of Engineering Geology and Hydrogeology, WN Shipping USA, 156-15, 146th Avenue, 2nd Floor, Jamaica, NY 11434, USA.

All other Subscriptions: All correspondence relating to trade subscriptions should be addressed to the Journal Subscriptions Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath, UK, BA1 3JN (tel 01225 445046; fax 01225 442836; e-mail: sales@geolsoc.org.uk). The online + print subscription prices for 2019 can be found here: <https://www.geolsoc.org.uk/lcprices>. More information about subscription options can be found at <http://www.geolsoc.org.uk/lcaccess>. Outside Europe, the Journal is dispatched by various forms of airspeeded delivery.

Cover Photograph. The journey-time between Gundewein and Mekane Selam, two towns located at approximately 2660 m a.s.l. in the Ethiopian Highlands, has been cut by more than 75% by the construction of 129 km of mountain road and a 300 m long bridge. The bridge is across the Blue Nile and 58 km of this new road descends and ascends the steep sides of the 1300 m deep Blue Nile gorge on an alignment with a cumulative rise and fall of over 2500 m over a straight-line distance of 21 km. The terrain is one of the most challenging of any for new road construction. Its underlying geology comprises Oligocene–Miocene basalt and pyroclastic rocks (pictured) overlying Cretaceous sandstone and siltstone which, in turn, overlie Late Jurassic limestone mudstone and shale. Its geomorphology comprises lithologically-controlled benches separated by sheer cliffs, with extensive deposits of colluvium, taluvium and rafted rock debris. Geohazards include large-scale rock toppling, rock falls, deep-seated and shallow landslides, flash flooding, shifting stream channels, slope erosion, stream erosion, debris flows, debris fans, seepage erosion and cavity collapse. The Total Geology Approach to design and construction involved landscape modelling, geotechnical reference condition mapping, engineering geological mapping and targeted ground investigation, implemented by a team of national and international specialists between 2006 and 2015. The dynamism of the terrain, and in particular the adjustment of its geomorphology to earthworks and road drainage systems, meant that slope stability and erosion problems required careful attention during construction, as they will during the operational lifetime of the road. The Gundewein – Mekane Selam road was designed initially by Renardet SA/SABA Engineering. This design was reviewed and revised by Scott Wilson (now AECOM). Construction was undertaken by CGC Overseas Construction Group, Beijing under the supervision of Scott Wilson/Dana & Associates and on behalf of the Ethiopian Roads Authority. Further details can be found at <https://doi.org/10.1007/s10064-015-0724-y> and <https://doi.org/10.1144/qjehg2018-058>
