London

THE GEOLOGICAL SOCIETY

The Society was founded in 1807 as The Geological Society of London and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of 'investigating the mineral structure of the Earth'. The Society is Britain's national society for geology with a membership of around 8000. It has countrywide coverage and approximately 1000 members reside overseas. The Society is responsible for all aspects of the geological sciences including professional matters. The Society has its own publishing house, which produces the Society's international journals, books and maps, and which acts as the European distributor for publications of the American Association of Petroleum Geologists, SEPM and the Geological Society of America.

Fellowship is open to those holding a recognized honours degree in geology or cognate subject and who have at least two years' relevant postgraduate experience, or who have not less than six years' relevant experience in geology or a cognate subject. A Fellow who has not less than five years' relevant postgraduate experience in the practice of geology may apply for validation and, subject to approval, may be able to use the designatory letters C Geol (Chartered Geologist).

Further information about the Society is available from the Membership Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU, UK. The Society is a Registered Charity, No. 210161.

Contents

HELSELBO, S. P. & PARKINSON, D. N. Sequence stratigraphy in British Geology	1
Non-marine and paralic sequences	
BURGESS, P. M. & ALLEN, P. A. A forward-modelling analysis of the controls on sequence stratigraphical geometries	9
LEEDER, M. R. & STEWART, M. D. Fluvial incision and sequence stratigraphy: alluvial responses to relative sea-level fall and their detection in the geological record	25
WONHAM, J. P. & ELLIOT, T. High-resolution sequence stratigraphy of a mid-Cretaceous estuarine complex: the Woburn Sands of the Leighton Buzzard area, southern England	41
WRIGHT, V. P. The use of palaeosols in sequence stratigraphy of peritidal carbonates	63
Shallow marine sequences	
TYSON, R. V. Sequence stratigraphical interpretation of organic facies variations in marine siliciclastic systems: general principles and application to the onshore Kimmeridge Clay Formation, UK	75
MACQUAKER, J. H. S., TAYLOR, K. G., YOUNG, T. P. & CURTIS, C. D. Sedimentological and geochemical controls on ooidal ironstone and 'bone-bed' formation and some comments on their sequence stratigraphical significance	97
COE, A. L. Unconformities within the Portlandian Stage of the Wessex Basin and their sequence-stratigraphical significance	109
Deep marine sequences	
SHANMUGAM, G. BLOCH, R. B., MITCHELL, S. M., DAMUTH, J. E., BEAMISH, G. W. J., HODGKINSON, R. J., STRAUME, T., SYVERTSEN, S. E. & SHIELDS, K. E. Slump and debris-flow dominated basin-floor fans in the North Sea: an evaluation of conceptual sequence stratigraphical models based on conventional core data	145
GALE, A. Turonian correlation and sequence stratigraphy of the Chalk in southern England	177
WOODCOCK, N. H., BUTLER, A. J., DAVIES, J. R. & WATERS, R. A. Sequence stratigraphical analysis of late Ordovician and early Silurian depositional systems in the Welsh Basin: a critical assessment	197
Regional studies	
KNOX, R. W. O'B. Tectonic controls on sequence development in the Palaeocene and earliest Eocene of southeast England: implications for North Sea stratigraphy	209
PARKINSON, D. N. Gamma-ray spectrometry as a tool for stratigraphical interpretation: examples from the western European Lower Jurassic	231
GLOVER, B. W. & MCKIE, T. A sequence stratigraphical approach to the understanding of basin history in orogenic Neoproterozoic successions: an example from the central Highlands of Scotland	257
Index	271
