## THE GEOLOGICAL SOCIETY

The Society was founded in 1807 as The Geological Society of London and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of 'investigating the mineral structure of the Earth'. The Society is Britain's national society for geology with a membership of around 7500. It has countrywide coverage and approximately 1000 members reside overseas. The Society is responsible for all aspects of the geological sciences including professional matters. The Society has its own publishing house, which produces the Society's international journals, books and maps, and which acts as the European distributor for publications of the American Association of Petroleum Geologists, SEPM and the Geological Society of America.

Fellowship is open to those holding a recognized honours degree in geology or cognate subject and who have at least two years' relevant postgraduate experience, or who have not less than six years' relevant experience in geology or a cognate subject. A Fellow who has not less than five years' relevant postgraduate experience in the practice of geology may apply for validation and, subject to approval, may be able to use the designatory letters C Geol (Chartered Geologist).

Further information about the Society is available from the Membership Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU, UK. The Society is a Registered Charity, No. 210161.

## Contents

### Introduction

- NICHOLSON, K., HEIN, J. R., BÜHN, B. & DASGUPTA, S. Precambrian to Modern manganese mineralization: changes in ore type and depositional environment 1

### Review

- ROY, S. Genetic diversity of manganese deposition in the terrestrial geological record 5

### Precambrian deposits

- GLASBY, G. P. Fractionation of manganese from iron in Archaean and Proterozoic sedimentary ores 29
- KULIK, D. A. & KORZHNEV, M. N. Lithological and geochemical evidence of Fe and Mn pathways during deposition of lower Proterozoic Banded Iron Formation in the Krivoy Rog Basin (Ukraine) 43
- BÜHN, B. & STANISTREET, I. G. Insight into the enigma of Neoproterozoic manganese and iron formations from the perspective of supercontinental break-up and glaciation 81
- MANIKYAMBA, C. & NAQVI, S. M. Mineralogy and geochemistry of Archaean greenstone belt-hosted Mn formations and deposits of the Dharwar Craton: redox potential of proto-oceans 91
- MUKHOPADHYAY, J., CHAUDHURI, A. K. & CHANDA, S. K. Deep-water manganese deposits in the middle to late Proterozoic Penganga Group of the Pranhita–Godavari valley, South India 105
- NICHOLSON, K., NAYAK, V. K. & NANDA, J. K. Manganese ores of the Ghoriajhor – Monmunda area, Sundergarh District, Orissa, India: geochemical evidence for a mixed Mn source 117

### Cenozoic deposits

- HEIN, J. R., KOSCHINSKY, A., HALBACH, P., MANHEIM, F. T., BAU, M., KANG, J. K. & LUBICK, N. Iron and manganese oxide mineralization in the Pacific 123
- CRONAN, D. S. Some controls on the geochemical variability of manganese nodules with particular reference to the tropical South Pacific 139
- VON STACKELBERG, U. Growth history of manganese nodules and crusts of the Peru Basin 153
- USUI, A. & SOMEYA, M. Distribution and composition of marine hydrogenetic and hydrothermal manganese deposits in the northwest Pacific 177
